Paradigmatic Relations in Word Formation

Jesús Fernández-Domínguez, Alexandra
Bagasheva y Cristina Lara Clares (eds.)

Paradigmatic Relations in Word Formation brings together contributions that aim to discuss the nature of paradigms in derivational morphology and compounding in the light of evidence from various languages.

Among others, the topics considered in the volume include the interconnectedness between derivational families and paradigms, the constitutive characteristics of a word-formation paradigm, the degree of predictability of word-formation paradigms, and the specificity of paradigms depending on the variety of recognised word-formation processes and patterns.
